

5. SUMMARY OF CLAIMED SUBJECT MATTER

Pursuant to 37 CFR §41.37(c)(v), the Applicant hereby provides a concise explanation of the subject matter defined in each of the independent claims involved in the appeal.

The present invention as defined in independent claims 13, 32 and 46 provides for displaying dynamic page content in a page-caching browser while avoiding the display of unintended page content in the browser. This is accomplished in certain embodiments by inserting, at the client, a unique identifier into a web page address and transmitting a request with the inserted unique identifier to a server.

Claim 13

Independent Claim 13 is drawn to a computer program product that can be used to avoid displaying unintended page content in a browser.

The present invention as defined in pending independent claim 13 is embodied in

a computer program product, comprising:

a computer-readable memory device; and computer-readable program code segments, stored on the computer-readable memory device (specification at page 18, line 25 to page 19, line 5).

receiving, at a client (reference character 100, Figure 2A) having a local cache (reference character 120), input related to a request for content of a web page, the request including an address for the web page(page 8 lines 13-15); and

in response to receiving the input, (step 695, Figure 4A):

determining, (step 620 Figure 4A) at the client, that there is content associated with the web page in the local cache (reference character 120, Figure 2A, page 16, lines 24-26);

inserting, at the client, a unique identifier into the address (step 695 Figure 4A, page 7 line 27) and

transmitting the request with the inserted unique identifier to a server (step 695, Figure 4A, page 7 line 28).

Claim 32

Independent Claim 32 is drawn to a method that can be used to avoid displaying unintended page content in a browser.

The present invention as defined in pending independent claim 32 is embodied in

receiving, at a client (reference character 100 Figure 2A) having a local cache (reference character 120), input related to a request for content of a web page, the request including an address for the web page(page 8 lines 13-15); and

in response to receiving the input (step 695 Figure 4A):

determining, (step 620 Figure 4A) at the client, that there is content associated with the web page in the local cache (reference character 120 Figure 2A, page 16, lines 24-26);

inserting, at the client, a unique identifier into the address; (step 695 Figure 4A, page 7 line 27) and

transmitting the request with the inserted unique identifier to a server(step 695 Figure 4A, page 7 line 28).

Claim 46

Independent Claim 46 is drawn to a method that can be used to avoid displaying unintended page content in a browser.

The present invention as defined in pending independent claim 32 is embodied in

receiving, at a client (reference character 100 Figure 2A), input related to a request for content of a web page, the request including an address for the web page (page 8 lines 13-15); and

in response to receiving the input (step 695 Figure 4A):

determining (step 620 Figure 4A), at the client (reference character 120 Figure 2A, page 16, lines 24-26),

whether to transmit the request to a server regardless of whether there is content associated with the address in a local cache (page 7 line 29); and

if the determination is to transmit the request to a server regardless of whether there is content associated with the address in a local cache:

inserting, at the client, a unique identifier into the address (page 7 lines 27-28); and

transmitting the request, with the inserted unique identifier, to a server(step 695 Figure 4A, page 7 line 28).

Applicants respectfully submit that the claims are in condition for allowance. Accordingly, Applicants respectfully request that the Examiner's rejections be withdrawn and notification of allowance be issued.

Respectfully submitted,

Date: June 16, 2008
